

**STAT460 – Homework 6**  
**Due: Mar. 4 at the start of class.**

For this homework, I want a brief write-up of your proposed project. This will include

- The overall scientific question(s) you want to answer (no need to go into tremendous detail, but just show me you've thought about it some)
- The data set you are going to use (include where it is coming from, any limitations or problems associated with its use)
- Some confirmation you can and have loaded that data set into R (maybe some summary information, or perhaps a small bit of code that you can use to load in the data)
